No rocket science Configure roof rack systems with Rameder

Ski racks, roof boxes or bicycle racks much enlarge a car's transport potential. But in most cases you need a basis. There are perfect systems for a closed or open roof rail with a T-nut of fixed-point, rain drains or normal roofs. But what here seems to sound like rocket science can actually be very simple, as is demonstrated by **Rameder**, Europe's leading provider of transport solutions for cars. So why not visit www.rameder.eu/roof-racks-ski-racks/

Here the German company provides an intuitive configurator and a mini tutorial. Simply activate the step-by-step search to determine the right model. And you will also find interesting background information, illustrated with easy-to-comprehend graphics and index cards. Visitors will find everything on the various system types, the pros and cons of aluminium and steel profiles and a number of tips, e.g. on the usable roof space or very quiet rack systems.

And you can order the right rack systems for skis, boats or bicycles in the market leader's online shop, too.
